KEA Imaging System

The document imaging market is populated with products that are designed using proprietary standards, have a closed architecture, or are targeted for a specific audience.

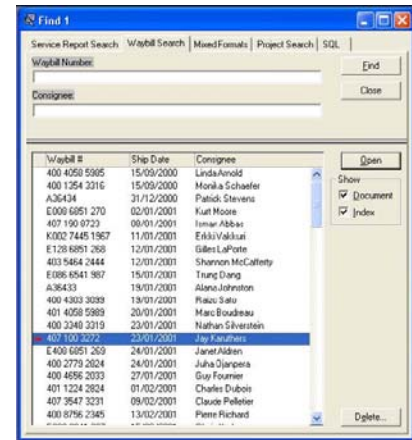

BUSINESS PROBLEM

Affinity Systems perceived a market for a complete document capture, storage, and retrieval system usable in topologies ranging from a single workstation up to a large enterprise running hierarchical storage subsystems and large database management systems.

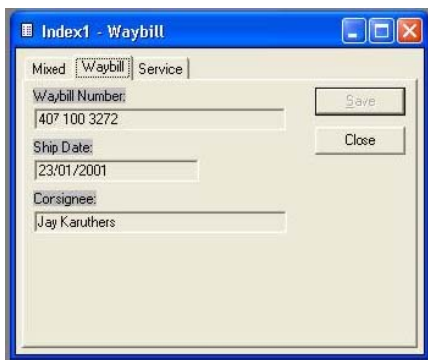

OUR SOLUTION

Affinity Systems designed and implemented an imaging product called Kea.

This product is installed at a number of large corporations in Canada. Kea is complete in functionality, offering advanced features such as annotations, COLD documents, and customizable meta-data. The product is independent of DBMS, storage subsystem, and scanning device. It scales from a standalone workstation up to hundreds of users. Its implementation approach was object-oriented, allowing for custom modules to be written to meet specific customer requirements.

Affinity Systems developed several complementary applications to use in conjunction with Kea. The Kea Web

Server provides Web-based document search and retrieval capability of data loaded and indexed in Kea. The Kea COLD Loader supports automatic parsing and indexing of existing electronic data from legacy mainframe applications, allowing this data to be searched, retrieved, and viewed within Kea.

Kea comes with a comprehensive documentation set, produced by our documentation group, which includes reference and user manuals, configuration guides, and reference cards.

TECHNOLOGIES

- OLE
- SQLBase
- SQLServer
- AFP
- ODBC
- COM
- InstallShield
- CGI
- ISIS
- C++
- MAPI
- Oracle
- TIFF
- MFC
